Logical Operators

Python Logical Operators

Operator	Description
<code>and</code>	Both operands must be true
<code>or</code>	At least one operand must be true
<code>not</code>	Reverses the logical state of its operand

```
1 age = 18
2 has_id = True
3
4 age >= 18 and has_id    # True
5 age < 18 or has_id     # True
6 not has_id              # False
```

🧠 `and` = Both operands must be true · `or` = At least one operand must be true · `not` = Reverses the logical state of its operand

Truthy / Falsy □□□□□□

Python True / False □□□□□□

```
1 bool(0)           # False
2 bool(1)           # True
3 bool("")           # False
4 bool("hi")         # True
5 bool(None)         # False
6 bool([])           # False
```

Falsy False
